

Electrical Maintenance & Testing

"We recommend electrical equipment be inspected, cleaned and tested every 2-3 years."

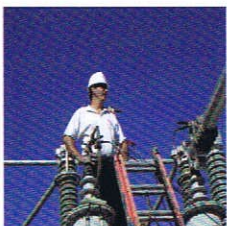

Rotating Equipment

From large generator inspections and testing, to fractional horsepower AC/DC motors; we can provide a full condition assessment report for all your rotating machines.

Switchgear Breakers & Relays

Circuit Breakers from 480V to 34KV can be field tested and/or shop repaired. Relay testing is offered for complex three phase microprocessor relays, solid state and electro-mechanical relays.

Power Transformers

We offer field transformer services; such as *re-gasketing*, oil filtering, analytical oil evaluation, and complete electrical testing (including Doble) for all size transformers.

Motor Control Centers

We can rebuild and upgrade your motor control buckets to microprocessor based protection in our shop, or provide basic field testing such as overload testing and meggering.
